Introduction

This third edition of the **Saskatchewan Software Directory** was compiled by the Science and Technology Division of Saskatchewan Economic Diversification and Trade. It is based on information obtained through a survey of Saskatchewan software developers, and provides an inventory of their current capabilities, products and services.

Every attempt has been made to canvas as many companies as possible within the broadest context of software developers. Any omissions are unintentional and the result of lack of knowledge of a company's existence, or lack of response by the company to the survey questionnaire.

While every effort has been made to ensure completeness and accuracy, the Science and Technology Division disclaims any responsibility or liability for costs or damages that may be incurred through use of all or part of the information contained within these pages.

Distribution of this Directory and the appearance or absence of a company herein is not to be considered an endorsement or non-endorsement of a specific company, product or service.

The Science and Technology Division gratefully acknowledges the co-operation of Saskatchewan firms through the various phases of this project.

We welcome your questions, comments, or requests for additional copies of this Directory. Please contact Saskatchewan Economic Diversification and Trade, Science and Technology Division:

A Message From The Minister

It is my pleasure to introduce the Third Edition of the Saskatchewan Software Directory, a showcase of our Province's software entrepreneurs. This publication illustrates the superior products and services that make our Province second to none in its software capabilities. Saskatchewan companies are encouraged to use the directory in marketing their software expertise.

Through this Directory, we recognize the role of our software developers as innovators and significant contributors to the economic development of our Province. As a result of their efforts, Saskatchewan enjoys an international reputation as a dynamic centre for software development.

We, in the Department of Economic Diversification and Trade, invite you to use this document as an industry inventory for product and services sourcing.

Honourable Dwain M. Lingenfelter
Minister
Saskatchewan Economic Diversification and Trade

Sector Profile

The software industry is distinctive and separate, yet stretches horizontally across all industry sectors.

There are currently 86 Saskatchewan companies categorized as "software developers," a net increase of two companies over 1990. Saskatchewan's software sector shows strength in the areas of systems integration, banking systems, healthcare, government, geographic information systems, farm management, transportation, open systems, and artificial intelligence.

Total revenues of all Saskatchewan software companies in 1990 was slightly over $200 million. The revenue from software products alone was approximately $35 million.

The industry employs over 1750 people, 450 of which are software technicians, programmers or engineers. Surveys indicate that Saskatchewan software companies are consistent with the national average, with 70% employing seven staff or less and 40% employing four or less.

Organizational support for the Saskatchewan software industry exists at provincial and national levels. The Software Developers Association of Saskatchewan (SDAS) was formed in 1988 to create a uniform voice for the industry, and to provide a vehicle for dialogue with government and networking between companies. Similarly, the Saskatchewan Advanced Technology Management Association (SATMA) supports all sectors of the advanced technology industry, including software. National software-related associations with Saskatchewan representation include the Canadian Information Processing Society (CIPS) and the Information Technology Association of Canada (ITAC).

The Saskatchewan Ada Association was formed in 1990 to capitalize on industrial benefit opportunities arising from the involvement of a number of Saskatchewan firms in major space and defence programs. The expected result is a transfer of sophisticated software engineering technologies to Saskatchewan's smaller companies. A proposed Software Engineering Centre will enhance the abilities of all Saskatchewan software developers to meet the challenges of producing high quality software for a competitive market.

Government Programs

The following programs are available through the Science and Technology Division of Saskatchewan Economic Diversification and Trade:

INDUSTRIAL RESEARCH PROGRAM

To encourage research, development and new product/process development by Saskatchewan firms.

JOINT HIGH TECHNOLOGY RESEARCH PROGRAM

To support projects in technology fields of high provincial priority.

REQUEST FOR PROPOSALS PROGRAM

To assist Saskatchewan companies to compete for large research and development projects originating outside the province.

INFORMATION TRANSFER PROGRAM

To bring industry-oriented technological information into the province through activities such as seminars, conferences, and invited speakers.

ENVIRONMENTAL TECHNOLOGY DEVELOPMENT PROGRAM

To assist Saskatchewan companies and researchers develop and test technologies which will help protect the environment.
